Kyron eKYC Dataset Result Dashboard

Expected pass/fail readiness snapshot - generated from local test_dataset

Images counted	Videos counted	Ready modules	Need data
4,551	1	1/7	3

Readiness split

Ready 1 Partial 3 Needs data 3

Function coverage by dataset

Counts are expected outcomes by folder label, not final measured model accuracy.

Function	Expected pass	Expected fail	Status
Passport upload / fraud Ready for first broad document benchmark; add more rare real fraud.	1,601	815	Ready
Lao ID OCR Detector data exists, but OCR needs real expected-name/expiry labels.	1,024	0	Partial
Printed document copy Too small for accuracy; collect printed and real camera samples.	10	10	Partial
Active liveness Needs videos or frame bursts for real and replay actions.	0	0	Needs data
Hand gesture No usable gesture dataset counted in test_dataset.	0	0	Needs data
Selfie passive liveness Spoof set is strong; real-live positives are still too small.	18	1,073	Partial
Face login Needs enrolled identities, unknown users, and replay attempts.	0	0	Needs data

Expected pass/fail balance

Expected pass 2,653

Expected fail 1,898

Use this as a collection/readiness view until evaluation scripts produce measured accuracy.

Next data to collect

1. Active liveness videos for real face and screen replay on phone/tablet/laptop.
2. Face login data: 20-30 enrolled identities, unknown users, printed photo, and screen replay.
3. Printed passport and Lao ID copies: at least 50 real and 50 fake per document type.
4. More real live selfies to balance the large spoof set and tune false rejects.
