Results & validation

VALIDATED RESULTS

Document upload

OCR + TD3 MRZ check-digit validation, quality & tamper ensemble

95.7%

Document verification accuracy

10,000 labelled passport & ID images — genuine documents read end-to-end, forgeries & print / screen copies rejected

Face liveness (anti-spoof)

facenox PAD model + face-size gate + replay heuristics, 3-frame burst

96.4%

Liveness detection accuracy

10,000 bursts — real faces accepted, printed-photo, phone / tablet / laptop replay & video attacks rejected

Methodology: accuracy measured on a balanced validation set of ~10,000 labelled images per category (genuine vs. attack). Dataset expansion and threshold tuning are ongoing — figures reflect the current operating point and will tighten as the corpus grows.
